

Student Learning Funnel Analysis & KPI Reporting

Prepared By: G V Sri Sowmya

Date: 15 June 2026

1. PROJECT OVERVIEW

The objective of this project is to analyze student progression through different stages of the learning journey and identify bottlenecks affecting conversion rates.

The analysis focuses on:

- Student Registration
- Active Participation
- Assessment Completion
- Course Completion
- Placement Readiness

Power BI was used to create dashboards and visualize key performance indicators.

2. DATASET OVERVIEW

The dataset contains student-level information including:

- Student ID
- Student Name
- College Name
- Department
- Registration Date
- Active Status
- Assessment Score
- Course Completion Status
- Placement Readiness Status

3. FUNNEL ANALYSIS

Student progression across different stages:

Funnel Stage	Student Count
Registered	500
Active	428
Assessment Completed	455
Course Completed	222
Placement Ready	117

Observation:

The number of students decreases at each stage of the funnel, indicating drop-offs during the learning journey.

4. KPI CALCULATIONS

Registration Count

500

Active User Count

428

Assessment Completion Rate

91%

Formula:

$\text{Assessment Completed} / \text{Registered} \times 100$

Course Completion Rate

44.4%

Formula:

$\text{Course Completed} / \text{Registered} \times 100$

Placement Readiness Rate

23.4%

Formula:

$\text{Placement Ready} / \text{Registered} \times 100$

Overall Funnel Conversion Rate

23.40%

Formula:

Placement Ready / Registered $\times$ 100

5. DROP-OFF ANALYSIS

The drop-off percentage between each stage is shown below:

TRANSITION	DROP-OFF PERCENTAGE
Registered $\rightarrow$ Active	14.40%
Active $\rightarrow$ Assessment Completed	94%
Assessment Completed $\rightarrow$ Course Completed	51.2%
Course Completed $\rightarrow$ Placement Ready	47.30%
Highest Drop-Off	46.6%
Overall Funnel Conversion	23.40

Highest Drop-Off Stage:

Reason:

This stage experiences the maximum loss of students and requires focused intervention.

6. COLLEGE ANALYSIS

College-wise performance was analyzed to determine which institution achieved the highest learning completion rate.

Highest Performing College:

Key Observation:

Students from this college demonstrated stronger progression through the learning funnel compared to other colleges.

7. DEPARTMENT ANALYSIS

Department-wise funnel analysis was conducted to identify the strongest performing department.

Best Performing Department:

Key Observation:

Students from EEE department achieved higher completion and placement readiness rates.

8. IMPACT OF ASSESSMENT PERFORMANCE

Assessment scores were compared against course completion rates.

Observation:

Students with higher assessment scores showed significantly better course completion rates.

This indicates a positive relationship between assessment performance and successful course completion.

9. DASHBOARD VISUALIZATIONS

The Power BI dashboard includes:

- KPI Cards
- Funnel Chart
- Department-wise Analysis
- College-wise Analysis
- Placement Readiness Analysis
- Trend Analysis

These visualizations help stakeholders monitor student progression and identify areas requiring improvement.

10. BUSINESS RECOMMENDATIONS

1. Introduce mentoring programs for students after assessment completion.
2. Provide personalized support to students with low assessment scores.
3. Conduct regular engagement activities to improve active participation.
4. Start placement preparation programs earlier in the learning journey.
5. Continuously monitor funnel performance using Power BI dashboards.

11. CONCLUSION

The analysis successfully identified student progression patterns, conversion rates, and funnel bottlenecks.

The findings indicate that improving engagement, assessment support, and placement preparation can significantly increase overall funnel conversion and placement readiness rates.
